

# A Tale of Two Properties:

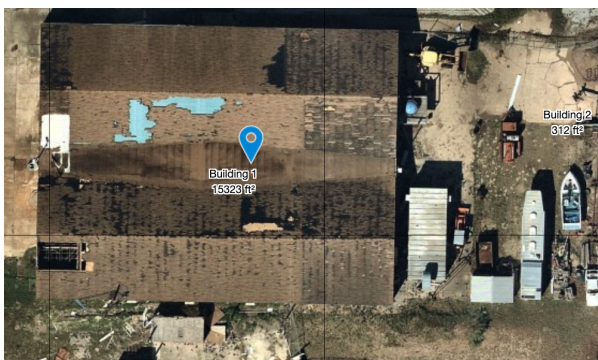

Both commercial properties receive similar risk profiles based solely on on-the-ground inspections...

Using the property intelligence provided by Betterview — including our unique Roof Condition Score — property 1 receives a low score, while property 2 gets a much higher one.

One experiences major losses after a wind event; the other does not.

With a more thorough and accessible understanding of risk, underwriters can better prevent future losses — and assist the insured in taking risk mitigation actions.

100% of the time the Betterview platform **discovers risk factors that carriers were unaware of** regardless of their current analytics or modeling environment.
