

# Visual Intelligence for Claims

Instant damage reporting, helping insurers automate decisions and settle claims via a digital experience.

## The great challenge for insurers

Claims management requires technology solutions that simplify core processes and speed up the response to customers.

### Visual FNOL

We facilitate the automation of vehicle claim notifications (FNOL).

#### Visual FNOL Management

After providing notification of the claim, the policyholder or an expert can collect and send evidence of the damage autonomously or with photo or video guidance, assisted by Bdeo's Visual Intelligence engine.

#### Visual Damage Detection

Artificial Intelligence analyzes and weighs up the damage down to the last pixel. This includes type, location, severity, and even the extent of the damaged surface.

#### Visual Triage

Bdeo makes it easy for the insurer to determine whether to offer compensation based on the damage found, carry out a remote assessment, or send an expert to inspect the vehicle.

### Benefits

Simplification of the key processes in the reporting of a claim

Easy to use for insurers and policyholders

Anti-fraud control

Improve the digital policyholder experience

# Visual Estimate

Automated cost estimation on damaged vehicles.

## Cost Estimation

Bdeo makes it easy for an insurer to estimate the cost of repairing a damaged vehicle by combining their own images with our Visual Intelligence.

### Benefits

Automated cost estimation on damaged vehicles

Simplification of key processes in cost estimating

Anti-fraud control

Easy to use for insurers

# Visual Total Loss

Help in the automation of total claims.

## Total Loss Management

Bdeo's Visual Intelligence helps insurers automate the compensation value recommendation

### Benefits

Simplification of key processes in the total loss of a vehicle

Easy to use for insurers, policyholders, assessors, brokers, etc.

Anti-fraud control

Improve the digital policyholder experience
