

An Industry In Flux: Four ways the insurance industry changed in 2020

As social distancing became the norm in 2020, ten of the twelve top US insurance carriers adopted HOVER technology. Easy and fast to implement, HOVER allowed carriers to improve 'business as usual'. A shift to virtual adjusting allowed carriers to protect their policyholders and employees, making accurate measurements easy, even from afar.

FASTER CYCLE TIMES

Settle claims in hours, not weeks.

HOVER streamlines the efficiency and accuracy of virtual inspections, getting claims closed faster.

POWER TO THE POLICYHOLDER

Allow policyholders to supply data.

A homeowner can send an adjuster all the property information they need in just a few smartphone photos.

A PATH FORWARD IN 3D

Turn a loss into a gain with an engaging 3D model.

65% of homeowners opened their 3D model--a first step in turning a property loss into a realm of new possibilities.

PREVENTING CLAIM LEAKAGE

Photo inspection helped save \$1.4M.

HOVER aided in a 60% reduction in field claim losses, reducing costs while making best use of time and manpower.
