

Discovery Navigator is revolutionizing information collection

Capture critical data with ease

Getting a complete picture of the medical history and pertinent data relative to a claim is critical to successful resolution. Traditionally, it has taken substantial resources to get this key data out of unstructured medical records.

The Challenge:

- Many bills aren't currently in a claims database
- Manually retrieving actionable medical information is inefficient
- Medical bills do not capture visit information

Discovery Navigator automates this important information

ISO Claims Partners has developed Discovery Navigator that automates the retrieval of medical information through sophisticated AI. The solution pulls key data from medical records and provides clients with the information they need in a format that can be easily reviewed and uploaded into their claims management system.

Select terms Discovery Navigator identifies:

Body parts

Prescription drug information

Comorbid conditions

Diagnosis codes

Boost Your Team's Efficiency

Obtain actionable medical information from hundreds of files in hours.

Discovery Navigator Service Components

Our service provides a solution for organizations that need to pull key data from a medical file.

Key features of the service include:

- automated extraction of key medical information from patient files
- pull information like ICD Codes, medications, comorbidities and more
- term tagging to allow filtering by type of medical term
- identified information available in an easily uploaded table or document
- ongoing development of features and capabilities to further streamline the medical record review process
