

Automatically smarter | Exponentially faster | Remarkably flexible

Our decision software lessens the mental load on employees, improving both job satisfaction and employee retention.

## How is Claimatic a win/win for both employers and employees?

### **Makes onboarding easier and simplifies the training process**

The more sophisticated your claims process, the less manual work (and thus less training) is needed. Employees simply collect the information and let our tool do the rest. They no longer need to know how to manage every possible claims permutation.

### **Reduces overall risk and ensures better claims handling and processing**

You avoid having unqualified people touching claims. Furthermore, when employees leave the company or retire, you have their knowledge documented in a system instead of losing it to attrition.

### **Automation allows for greater long-term employee support, boosting happiness and productivity**

With less manual claims processing time needed, employees will have room to upskill in other areas of interest. That benefits your company as well as supports their career advancement.

### **The Facts**

- Since the 1990s, experts have been declaring burnout levels are reaching epidemic proportions among North American workers.
- Research shows that the need for technological skills will increase 55% from now until 2030. In claims specifically, the expectation is that 50% of the tasks associated with that role will become automated.
- 70% of Americans, especially the younger population, seek career opportunities that feel meaningful and purposeful

With Claimatic, you can easily configure and monitor resource availability as well as team capacity.

This helps you flag situations where your claims team is getting stretched thin and take action to protect them against burnout.

“ We had to revise our training document. Now that we have Claimatic in place, I was able to remove 5 pages of instruction. — VP of Operations, Auto Insurance Carrier ”

## What you get with Claimatic

### Automated Claims Assignment

Assign claims in seconds after evaluating more than 25 standard and unlimited custom attributes.

### Custom Dashboards & Reports

Monitor claim assignments, resource availability, capacity, licenses, skills, and more via standard or custom dashboards or reports.

### Scenario Planning

Create and test scenarios outside of production and deploy at will. Easily revert back to normal operations once the surge has passed.

### Workforce Management

Create and test scenarios outside of production and deploy at will. Easily revert back to normal operations once the surge has passed.

### Plain-English Rules

Build rules using simple if/then logic and then drag-and-drop them into place.
