

**Intelligent
Intake means...**

**better claims
outcomes**

Automate claims processes with the Indico Data Intelligent Intake Solution

Improve your loss ratios, accelerate speed of settlement and improve customer retention with Indico data's Intelligent Intake solution. By automating critical claims workflows, you can speed up your decision-making process and accurately assess which claims to accept or deny while avoiding tedious, manual tasks, allowing you to deliver more business value.

Only Indico enables claims agents to:

Optimize risk and loss ratios

Automating the claims process with Indico Data enables you to accurately adjudicate or deny the right claims, as well as better detect inconsistent claims.

Improve customer satisfaction

By automating claims intake you can speed up the settlement process driving better customer experiences, reducing customer churn.

Increase efficiency

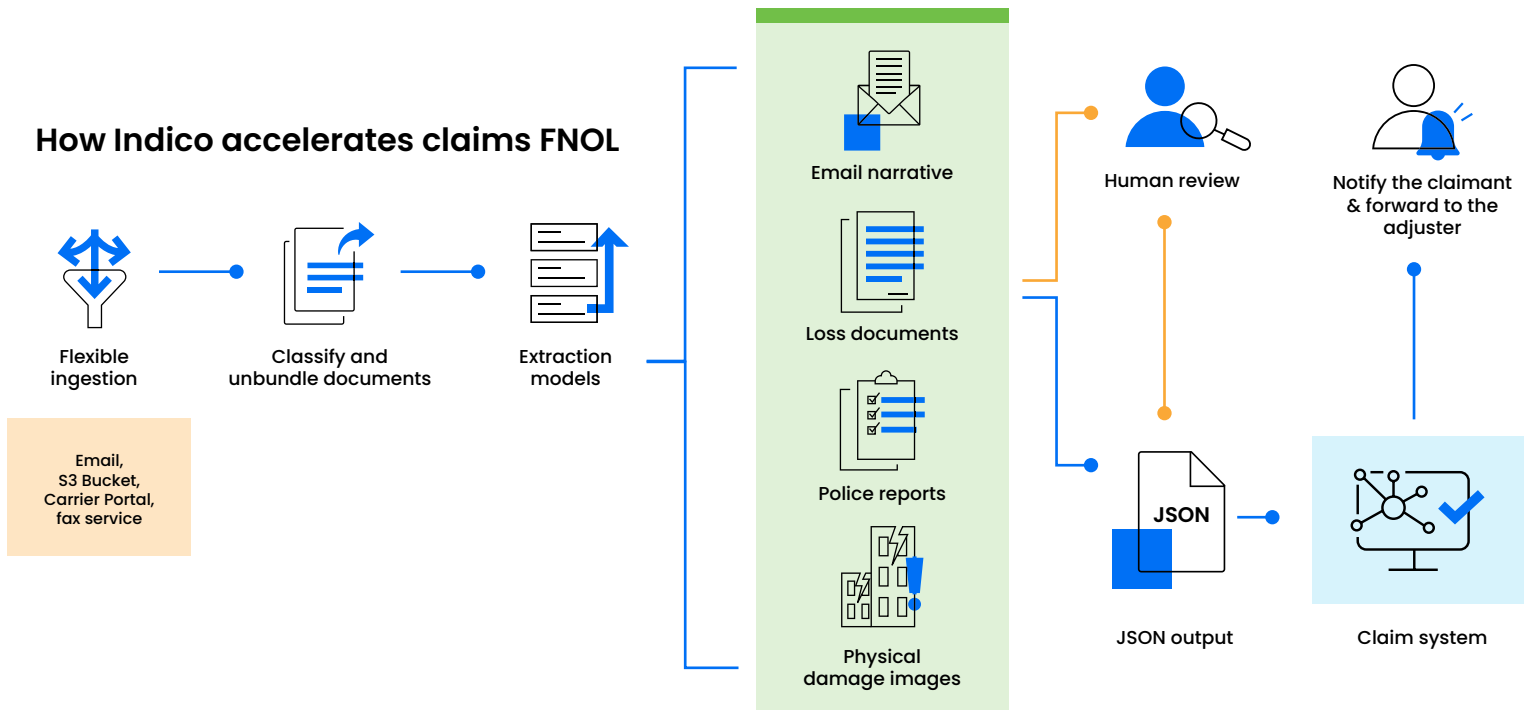

Indico Data allows you to reduce intake process costs while managing surges in claims volume so that you can keep up.

The Indico Platform lets our senior product and business leaders get directly involved in building models and driving automation at Chatham. With Indico's expertise and just a few hundred documents, we've successfully delivered cutting edge models in a way previously considered impossible.

Intelligent intake, intelligent claims submissions

Indico Data's AI and ML technologies helps streamline complicated, manual workflows that claims experts face every day. Now, you can accelerate the processing of documents, images, first notice of loss (FNOL), policies and other data—structured and unstructured—without sacrificing due diligence.

How Indico accelerates claims FNOL

DocumentDNA™ powers intelligence

At the heart of Indico Data's solutions is DocumentDNA, our proprietary approach to modern AI and machine learning. DocumentDNA enables seamless multi-channel, multi-document intake for any format, using accurate, automated processes that keep your employees "in the loop" – giving you the power to make more informed decisions faster.

Highest Accuracy

Powered by an AI-driven, multimodal fusion approach to document understanding, we gather both semantic and visual information to drive decisioning

Fastest Time to Value

Our unique approach to transfer learning enables you to build custom ML models with as few as 200 sample documents – not thousands

Strongest ROI

Enabled by a patented ML interface, non-technical users can create custom models with our "bionic-arm" approach to stay in the loop of the processes they are automating

With Indico Data,
MetLife achieved:

3X
increase
in SME capacity for
regularity response

40%
savings in legal expenses
for contract review and
abstraction (projected)

60%
reduction in time to get
to IGO on structured
settlements
