Solution Overview

The Insurer Challenge

Emerging new risks, climate change, technological advances, and socio-political shifts are creating an entirely new set of challenges that test the traditional boundaries of underwriting and risk management. Insurers are grappling how to navigate this complex, unpredictable landscape while meeting increased customer expectations for personalized services and competitive pricing. It's not just about assessing risk anymore; it's about anticipating and managing it to drive risk resilience, profitability, and customer satisfaction.

Solution

Majesco Loss Control elevates risk management to meet this breadth of insurer demands, keeping them ahead of the risk curve. Loss control is not limited to just the complex, high-risk scenarios, but can be used across the broader portfolio using self-service capabilities, seamless automation, and integration into core operations.

Benefits

- **Operational Optimization:** Seamlessly integrate data across platforms to reduce manual effort and optimize productivity.
- **Risk Resilience:** Harness the power of data intelligence to spot emerging risks and improve underwriting profitability.
- **Digital Risk Assessment:** AI-driven video risk assessments expedite evaluations, reducing the need for on-site visits and saving you valuable resources.
- **Underwriting and Portfolio Profitability:** Utilize AI-enabled property risk assessment models to precisely determine risk levels for diverse properties, individually or entire portfolio to make smarter decisions.
- **Data Driven Insights:** Access the industry's largest set of survey data, comprising over 16+ million property surveys and 200+ million tagged photos.

About Partner

Majesco is the partner P&C and L&AH insurers choose to create and deliver outstanding experiences for customers. Majesco Loss Control drives predictive risk insights with intelligent loss control solutions for P&C insurers and top risk engineering companies. Majesco Loss Control leverages the world's largest repository of survey data, coupled with a suite of workflow tools designed to inform smarter underwriting decisions. A typical implementation provides positive ROI within the first year.
