

Transitioning Your Core Platform Efficiently To Serve Your Customers Better

Situation: Self-managed customers seek a trusted way to migrate to the cloud to meet the complex needs of their business and customer base with efficiency and ease.

Desired customer benefits in working with Capgemini's Guidewire Cloud Upgrade Factory:

Through Capgemini's Guidewire Cloud Upgrade Factory, customers will migrate to Guidewire Cloud efficiently at speed, with higher quality and predictability, and lower risk. Capgemini brings together its capabilities and expertise around transformation and couples it with our technical expertise in Guidewire, allowing clients to realize the advantages of a flexible, cloud-based platform as quickly as possible. Our team of certified Guidewire practitioners have dedicated upgrade experience, including a physical delivery location in Columbia, SC, supported by a global network of delivery centers in Vietnam, Poland, UK, France, Mexico, and India to support.

Unique differentiators: Describe how Capgemini is driving down risks and migration costs:

Capgemini's decade-plus of experience in upgrades and Guidewire Cloud experience will help to reduce risk in the following ways:

- Assets, accelerators, and frameworks that address concerns, risks, and challenges of Guidewire Cloud upgrades
- Pre-built target IT operating model designs to address the transition from self-managed to a vendor-management focused SaaS model

Capgemini will reduce Guidewire Cloud transition costs by reducing resource costs and shortening the overall duration of Cloud transitions. The Capgemini Guidewire Cloud Upgrade Factory, together with our Global Delivery Model and our industrialized approach to upgrades, will drive these cost savings:

- Mutualized resources in our delivery centers will allow us to make scarce expert talent available to clients when they need it and at fractional levels, allowing us to reduce the cost of this expert talent.
- Industrialized delivery across the upgrade lifecycle will shorten each phase of the Guidewire Cloud transition. This includes:
 - Functional assets/accelerators to map client requirements to OOTB Guidewire Cloud capabilities, technical assets/accelerators to shorten config and integration work, and pre-built, GW Marketplace certified AWS-native test scripts to test the upgraded code more quickly and deliver it with higher quality.

- Data integration capabilities include a CDA Ingestion framework, which enables consistent data consumption. Customers gain a point-in-time view of the data and access to the latest view of data, matching the database view of the Guidewire operational DB. This simplifies the integration of CDA data with existing data assets and newer enterprise data capabilities, thus lowering data analytics cost.
- Finally, Capgemini's capabilities and expertise around transformation will help clients unlock the value of Guidewire Cloud by enabling digital engagement and improved data analytics, thus driving further savings.
